

MEGAPORT ONE

Connect anything. Control everything.

ONE Platform to Orchestrate, Network, and
Enable Cloud Services.

Megaport ONE is a white-label, multi-tenant SaaS platform for data center operators (DCOs) and managed services providers (MSPs) to help their customers orchestrate, network, and enable their cloud services.

Whether they're looking for high-performance computing (HPC) infrastructure, networking from on-prem to cloud or cloud to cloud, or better data to more cost-efficiently deploy their applications in the cloud, Megaport ONE is the ONE place for your customers to connect and control their infrastructure and operations.

Megaport ONE provides a true single pane of glass experience, enabling your customers to spin up a myriad of public, private, and hybrid infrastructure resources from the edge to the cloud. For your customers, Megaport ONE is:

01

Orchestrate

Find, manage, and provision high-performance network connectivity, cloud, edge, and compute/GPU resources easily in one place.

02

Network

Automate the provisioning of pre-lit infrastructure and benefit from a global private backbone.

03

Enable

Deploy cloud-native applications and GPU-destined workloads with real-time reporting and analytics.

Why Megaport ONE?

Megaport ONE is the one place where your customers can orchestrate distributed edge, core, and cloud resources and turn metrics into actions that will improve the cost-efficiency and performance of their cloud deployments.

From resource utilization statistics to latency, jitter, and packet loss dashboards and reporting, Megaport ONE gives your customers the ultimate level of visibility and control into the hybrid cloud and multicloud environments.

Megaport ONE includes:

Multi-tenant and white-labeled SaaS platform

Dashboard visibility into all infrastructure and cloud resources

Access to Megaport's suite of Network as a Service (NaaS) solutions, including on-prem to cloud, cloud-to-cloud, and branch-to-cloud connectivity.

Real-time reporting and analytics on your clouds, clusters, servers, and applications

Bring Your Own (BYO) cloud keys, applications, and APIs

Geo load balancing for network performance

Seamless access to hybrid and multicloud environments including Amazon Web Services (AWS), Microsoft® Azure, Google Cloud, Bare Metal, and edge infrastructure.

AI-powered cloud service pricing capabilities so you can control cloud costs.

Megaport ONE Features

Single pane of glass - One place to manage and consume network and compute services, making deployment fast and simple

Global backbone - A global network with over 700+ data center locations and private connectivity in every region across the world

Agile network services - The world's most advanced NaaS solution portfolio, including private cloud, cloud-to-cloud, and branch-to-cloud connectivity

DCO/MSP Challenges

Distributed infrastructure and applications - Multiple portals and processes present obstacles to end customers and slow the consumption of DCO/MSP services

Lack of global reach - Limited connectivity options outside of regional and localized services

Inflexibility - Rigid legacy networking solutions that can take months to provision

Transformational Benefits

All things cloud in one place - Centralize visibility, monitoring, reporting, and analytics in one unifying platform that allows for agile IT that can meet rapidly-shifting application and customer demands

High-performance networking anywhere - Gain instant access to a global private network backbone that can help accelerate and scale operations and offer more choices than ever to your applications and customers

Fast and easy connectivity - Simplify and enhance connectivity with modern software-defined networking. Point, click, and connect!
